

CONSTRUCTION SERVICE OVERVIEW

WHAT WE DELIVER

Maurer-Stutz, Inc. provides expert construction engineering services, delivering reliable, cost-effective, and high-quality solutions for a variety of construction projects. Our experienced engineers and technicians leverage advanced technology, including Appia, CMMS, and Esri to ensure precise project execution, compliance, and long-term infrastructure management. We use Appia or CMMS to streamline construction management with real-time reporting, contract administration, material quality assurance, and stakeholder coordination. Esri's GIS capabilities support post-construction asset management by providing survey grade as-built data for long-term asset management. Our experience in construction engineering enables us to proactively identify and address potential issues during on-site observation and material testing, preventing them from escalating into serious problems.
