GEOSPATIAL SERVICES

FIBER SERVICES OVERVIEW

WHAT WE DELIVER

We deliver tailored geospatial solutions for the FTTX industry. Our Geospatial Fiber Services optimize every stage of your network—from initial deployment to ongoing management—providing accurate, reliable insights that drive better decision-making.

ABOUT US

MSGs delivers precise, data-driven geospatial solutions for complex challenges. From civil utility inventories to infrastructure planning and agriculture, we use advanced GIS tools for actionable insights. We streamline processes and enhance decision-making from start to finish.

GIS DATA CONVERSION

MSGs seamlessly integrates fiber network data into Esri ArcGIS, providing real-time updates, advanced analytics, and full control over your network's digital twin.

MANAGED SERVICES

MSGs handles all aspects of fiber network management, from daily operations to long-term monitoring, including CrescentLink management, system enhancements, and on-demand support.

CRESCENTLINK DEPLOYMENT

MSGs simplifies GIS data migration by converting your existing data into the CrescentLink data model through our strategic partnership with GEOGRAPH.

SPLICE RECORD IMPORTING

MSGs standardizes, cleans, and imports splice records into GIS systems, improving network visualization, troubleshooting, and fiber management.
